**FOR IMMEDIATE RELEASE**

**CapStone Technologies AutoViri Software Earns the Vanguard Breakthrough Award**

*PRINT19 Vanguard Breakthrough Awards recognize products and services that advance an existing technology or process, pushing the boundaries of what products in the category can accomplish.*

**LINCOLN, Neb., October 2, 2019** – AutoViri Software has been selected for recognition in the RED HOT Technology Vanguard Award program and earned the Vanguard Breakthrough Award. CapStone Technologies AutoViri Software was just one of seven entries to gain recognition in the 2019 Vanguard program.

Fritz Buglewicz, EVP of Business Development for CapStone Technologies, accepted the trophy and acknowledged this recognition in a special ceremony during the Association for Print Technologies' membership and media event on October 2nd at McCormick Place in Chicago.

CapStone Technologies has introduced AutoViri Software, part of a comprehensive solution designed to make print-to-mail operations more efficient. The patented software is the only solution in the industry that connects the physical and digital workflows to give mailers virtual visibility into the entire mail production process.

Cloud-based AutoViri Software puts real-time information, such as job status and errors, in the hands of employees at every level in every department of a print-to-mail business. This information can be accessed 24/7 from anywhere, streamlining the work of production employees, management and leadership. The software can be used in any print-to-mail environment – automated, manual or anywhere in between.

"We are thankful to receive the Vanguard Breakthrough Award," said Troy Power, Co-Founder of CapStone Technologies, "we know that AutoViri Software is a powerful new tool for mailers of any type or size, especially small and medium-sized mailers not accustomed to having access to this level of automation specifically to suit their operations and budget. This recognition reinforces AutoViri Software as an innovative tool that integrates the digital and physical workflows to boost productivity and deliver protection against preventable errors that result in costly assessments."

AutoViri Software is part of a full suite of solutions that automate and streamline print-to-mail operations, including robots for sleeving, traying, tagging, and palletizing. The robots are designed to automate various manual, repetitive tasks that are part of typical print-to-mail operations. Used separately or together, AutoViri Solutions help mailers of all sizes operate more efficiently and protect their USPS workshare discount, increasing profitability.
